Art Unit: 2137

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-43, 98-117, 141-183, 238-280, 335-377, 432, 435, and 438, are drawn to using the Bluetooth protocol as a carrier for authentication, classified in class 713, subclass 200.

II. Claims 44-70, 118-129, 184-210, 281-307, 378-404, 433, 436, and 439, are drawn to using the Bluetooth protocol for authentication, classified in class 713, subclass 200.

III. Claims 71-97, 130-140, 211-237, 308-334, 405-431, 434, 437, and 440, are drawn to using the Bluetooth protocol for authentication and as a carrier for authentication, classified in class 713, subclass 200.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the

Art Unit: 2137

particulars of the subcombination as claimed because the combination could use a higher-level protocol other than Bluetooth as the carrier for authentication. The subcombination has separate utility such as using Bluetooth as a carrier of information other than authentication.

3. Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination could use a type of authentication different than the Bluetooth authentication. The subcombination has separate utility such as using the Bluetooth protocol for synchronization rather than authentication.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper. Group I would require a search in class 370, subclass 277 and class 455, subclass 151.2. While Group II would require a search in class 709, subclass 229 and class 380, subclass 23.

**Conclusion**
